

CEMIX VERTICAL RETARDER

DESCRIPTION:

CEMIX VERTICAL RETARDER is a formwork retarder of thick viscosity that can be applied by brush to formwork, prior to the pouring of concrete. Concrete that comes in contact with the treated formwork will be retarded allowing for the exposure of the surface with a brush and water. Will produce a deep etch. Can be used on steel or timber framework. Economical high coverage rate.

Within 24 hours of pouring, the formwork should be stripped and the retarded layer of mortar removed with a stiff broom and hosed water.

Trials should be conducted for time requirements. Local conditions and mix designs will affect the product's effectiveness.

COVERAGE:

Four to five square metres per litre.

PACKAGING:

CEMIX VERTICAL RETARDER is packed in 4 litre plastic bottles, 20 litre pail, and 210 litre drums.
