DESCRIPTION OF BUILDING PRODUCT

No Damp Waterproofing is a grey, elastomeric, styrene-acrylate copolymer-based, one-part, ready-to-use, liquid-applied membrane.

It is intended for use in negative pressure applications. This means it is applied internally. Whilst the substrate may get wet, the membrane prevents the moisture from entering the space. It may be used above and below ground applications but always applied internally.

It may also be used as an under-tile waterproofing system.

SCOPE OF USE & LIMITATIONS

No Damp Waterproofing is suitable for use with concrete, masonry, compressed fibre cement, plywood and particle board substrates.

The system must be applied to a structurally sound, securely fastened and supported substrate. This will avoid substrate movement related cracking. The substrate should also be dry.

It must not be left exposed.

CONTRIBUTION TO BUILDING WORK CODE OBLIGATIONS

This type of membrane is well-established in NZ. No Damp has a similar formulation to Rubberguard which has a BRANZ appraisal.

On this basis, Cemix can confirm that when used in building work, No Damp Waterproofing will contribute to building code compliance of the building work.

B2 (Durability) B2.3.1(b) B2.3.1(b)

E3 (Internal Moisture) E3.3.6

F2 (Hazardous Building Materials), F2.3.1
